

THE LAURACEOUS COLLECTIONS OF CARL FRIEDRICH PHILIPP VON MARTIUS IN THE *FLORA BRASILIENSIS*

PEDRO LUIS RODRIGUES DE MORAES¹ AND ANDERSON FALCADE¹

Abstract. This study refers to specimens of Lauraceae collected in Brazil by Carl Friedrich Philipp von Martius between 1817 and 1820. He collected 57 currently accepted species of Lauraceae, which belong to nine genera: *Aniba*, *Cassytha*, *Cinnamomum*, *Cryptocarya*, *Dicyphellium*, *Licaria*, *Nectandra*, *Ocotea*, and *Persea*, for which Martius is known to have made about 99 different collections. The vast majority of them are nomenclatural types and, taking into account the synonyms involved, encompassing 26 holotypes, 23 lectotypes, and 30 syntypes. Besides Martius himself, early descriptions and citations of these materials were made by Nees von Esenbeck, Meissner, and Mez, the first monographers of the family. Martius's collections were the basis for the *Flora Brasiliensis*, where the taxonomic treatment of Lauraceae was made by the Swiss botanist Carl Daniel Friedrich Meissner in 1866, being of particular interest for indicating all the collections examined and available at that time. Here, we provide an annotated and updated list of 60 entries with information on the status of the names and their types, currently accepted names, collections found in different herbaria, accompanied by an Index to Scientific names and an Index to Collections. Although there are no cases of specimens of Lauraceae collected by Martius from his "Martii Herbarium Florae Brasiliensis," they are also listed here since they have been attributed to him in literature. Lectotypes for two names, *Cryptocarya speciosa*, and *Nectandra nitidula* var. *maior*, are designated, and a new synonymy is proposed.

Resumo. O presente estudo refere-se aos espécimes de Lauraceae que Carl Friedrich Philipp von Martius coletou no Brasil entre 1817 e 1820. Ele coletou 57 espécies atualmente aceitas de Lauraceae, pertencentes a nove gêneros: *Aniba*, *Cassytha*, *Cinnamomum*, *Cryptocarya*, *Dicyphellium*, *Licaria*, *Nectandra*, *Ocotea*, e *Persea*, para os quais Martius é sabido de ter feito cerca de 99 coletas diferentes. A grande maioria das mesmas são tipos nomenclaturais e, levando-se em consideração os sinônimos envolvidos, englobando 26 holótipos, 23 lectótipos e 30 síntipos. Além do próprio Martius, as primeiras descrições e citações desses materiais foram feitas por Nees von Esenbeck, Meissner, e Mez, que foram os primeiros monografistas da família. As coleções de Martius serviram de base para a *Flora Brasiliensis*, onde o tratamento taxonômico das Lauraceae ficou a cargo do botânico Suíço Carl Daniel Friedrich Meissner em 1866, sendo de particular interesse por indicar todas as coleções examinadas e disponíveis à época. Aqui, apresentamos uma lista anotada e atualizada de 60 entradas com informações sobre o estado dos nomes e de seus tipos, nomes atualmente aceitos, coleções dos diferentes herbários, acompanhadas de um Índice de Nomes Científicos e de um Índice de Coleções. Embora não existam casos de espécimes de Lauraceae oriundos do "Martii Herbarium Florae Brasiliensis," que tenham sido coletados por Martius, esses também são aqui listados por terem sido atribuídos a ele na literatura. Lectótipos de dois nomes, *Cryptocarya speciosa*, e *Nectandra nitidula* var. *maior*, são designados, assim como uma sinonímia nova é proposta.

Keywords: Brazil, *Herbarium Florae Brasiliensis*, historical collections, nomenclature, taxonomy

Carl Friedrich Philipp von Martius was born on the 17th of April 1794 in Erlangen, Germany, and died in Munich on the 13th of December 1868. He is one of the most famous naturalists of the 19th century, having his name in close association with Brazil and its flora. In 1817, King Maximilian Joseph I of Bavaria, took the occasion of the marriage of the Archduchess Caroline Josepha Leopoldine von Habsburg-Lothringen with the Crown Prince, Dom Pedro de Alcântara, the future Emperor of Brazil, to send the zoologist Johann Baptist Spix and the botanist Carl Martius to join the Austrian scientific commission that was organized to accompany the entourage of the Archduchess on her departure to Brazil. These [and many other] scientists came to explore the Brazilian Kingdom, making collections of animals, plants, and minerals, investigating the productions of the countries visited, the culture, the inhabitants, etc. (Papavero, 1971). Martius arrived in Rio de Janeiro on the frigate "Austria" on the 15th of July 1817, accompanied by

the Austrian entomologist and botanist Johann Christian Mikán, and his wife, along with the Austrian painter Thomas Ender, and Spix (Martius and Rodrigues, 1956: 433; Papavero, 1971: 61). After some weeks in Rio, Spix and Martius decided to initiate their voyage through Brazil.

Spix and Martius collected in Brazil between 1817 and 1820. Detailed information about their itineraries and the places visited can be found in Spix and Martius (1823, 1828, 1831a, 1831b, 1968), Urban (1906), Papavero (1971), and in Tiefenbacher (1983). The journey itself began on the 8th of December 1817, with São Paulo as the first destination, reaching it by the end of the year (31st of December). In 1818, they left São Paulo for southern Bahia, gathering large collections especially in Minas Gerais and Bahia, where they arrived in November 1818. For a few months they collected in the northeastern states of Bahia, Pernambuco, Piauí and Maranhão, after which embarking for Belém in July 1819. The collecting followed by the Ilha de Marajó and other

Our thanks to Henk van der Werff (MO), for communicating the specimens on loan to him and for sending their images, and to Katharine E.S. Donahue (History & Special Collections, Louise M. Darling Biomedical Library, UCLA) for the help with the requested manuscript of Martius. Pedro L.R. de Moraes is supported by a grant (PQ2) from CNPq, and is grateful for the sponsorship received by the CAPES/DAAD Agreement for the years 2003, 2005, and 2008; a grant of FUNDUNESP (Proc. Nr. 00073/11-DFP), for his visit to MEL in 2011; stipends from the *Belgian Focal Point to the Global Taxonomy Initiative (GTI)*, which supported the visit to the Botanic Garden Meise in 2004 and 2012; and a sponsorship from CNPq (Proc. Nr. 450515/2013-3) for a visit to LE.

¹ Universidade Estadual Paulista "Júlio de Mesquita Filho", Instituto de Biociências, Departamento de Botânica, Av. 24 A 1515, Bela Vista, Caixa Postal 199, 13506-900 Rio Claro, SP, Brazil. Email: pmoraes@rc.unesp.br. Author for correspondence.

localities in the vicinity of Belém, Pará, then beginning the final stage of the expedition up the Rio Amazonas to Manaus, where Spix and Martius followed separate paths: the first followed by the Rio Negro and its tributaries and Martius followed the Rio Solimões and Rio Jupará. Both returned to Belém in April 1820 and in June of that year, embarked for Europe, arriving in Lisbon on the 23rd of August, and finally in Munich in December 1820 (Spix and Martius, 1823, 1828, 1831a; Urban, 1906; Shepherd, 2002).

The literature about the life and writings of Carl Martius is quite extensive, given the amount and importance of his work. Among the primary sources, we can highlight the texts by Lasègue (1845), de Candolle (1856a, b, 1857), Carus (1869), Eichler (1869a, c, d), Meissner (1869, 1870), Seemann (1869), Schramm (1869a, b), Spring (1870, 1871), Rau (1871), Wunschmann (1884), and Ross (1917). More recent literature and contextualized approaches about Martius's works can be found in Dutra (1942), Hoehne (1942), Rambo (1952), Sommer (1953), Biblioteca Nacional (1968), Stafleu and Cowan (1981), Wuschek (1989), Mägdefrau (1990), Förther (1994), and Lisboa (1995, 1997).

The collections of Martius during the travel to Brazil may be estimated at nearly 8,000 species, of which 800 were collected in port sites of Europe in Istria, Malta, Gibraltar, Madeira, and Portugal, at the beginning and the end of the travel (Martius, 1850; Wallich, 1851; Förther, 1994) (c. 20,000 to 25,000 specimens), thus becoming the foundation for the production of the *Flora Brasiliensis*. Martius originally edited this monumental work from 1840 to 1868, with the printing of 46 fascicles, where more than about 9,000 species were treated, illustrated in about 1,400 figures and 1,071 lithographs. The edition of the Flora was continued posthumously by August Wilhelm Eichler (1839–1887) and Ignatz Urban (1848–1931), with completion of the work in 1906. The *Flora Brasiliensis* in its final form consists of 15 volumes (in 40 parts) *in folio*, originally published in 130 individual fascicles (in 130 dated parts), the text consisting of 20,733 "pages" (the page numbers actually refer to columns, two on each page), and 3,811 lithographs and nature-prints, illustrating 6,246 species in full size. Given the magnitude of the undertaking, the work had the collaboration of 65 researchers including the most illustrious European botanists of the time, who have described a total of 22,767 species (Urban, 1908; Martius and Rodrigues, 1956: 434; Baldus in Spix and Martius, 1968: 8; Shepherd, 2002). The majority of those species are angiosperms, of which 19,629 are native to Brazil and 3,138 are from adjacent regions or introduced in the country. The treatment of Lauraceae in the *Flora Brasiliensis* was made by the Swiss botanist Carl Daniel Friedrich Meissner (1800–1874), which was published in Volume 5, Part 2, in 1866, with the description of 327 species. Among them, there are 64 taxa with the indication of collections made by or attributed to Martius.

During the expedition to Brazil, Martius made quick notes *in situ* for 3,320 species of plants, in his "*Adversaria Botanica*" (Martius, 1850: 723; Wallich, 1851: 68; Förther, 1994). Later, in his writings, he refers to this unpublished manuscript again. A handwritten copy made by A. Progel,

entitled "*Observationes botanicae, Plantae in itinere Brasiliensi annis 1817–1820 a Car. Frid. Phil. Martio descriptae, vol. 1–6*," bound in six volumes *in quarto*, is housed at the Library of the Botanische Staatsammlung München (Martius, 1817–1820). A xerographic copy of these volumes is also deposited in the Library of the Royal Botanic Gardens, Kew. Of key importance is the fact that many of the specimens collected by Martius have labels that refer to those comments, providing an additional source of information on the species (see Förther, 1994). For Lauraceae, all these cases have been registered here and referred to as "*Martius Obs.*," followed by their numbers.

Additionally, as pointed out by Förther (1994: 12), Martius received many collections sent from Brazil, in between the end of 1830 and the end of 1840, made by Ackermann (gathered in 1830–1836), P. Claussen (gathered in 1834–1843), B. Luschnath (gathered in 1831–1837), A. L. P. da Silva Manso (gathered ca. 1830–1832), and L. Riedel (gathered ca. 1821–1836), which were distributed by him to major European herbaria (e.g., B, BM, G, L, LE, M, W, etc.). Among them, there were a series of new species that Martius entitled as "*Herbarium Flora Brasiliensis*," being published in the journal *Flora* between 1837 and 1841 (Martius, 1837–1841). These exsiccatae distributed to herbaria bear printed labels with "*Martii Herbar. Flora Brasil. N°*," followed by a handwritten number, corresponding to what has been published in *Flora*. Although for Lauraceae there are no cases where the species were collected by Martius, often in the literature these collections were assigned to him. For this reason, they have been also listed in this work and, when known, their collectors are indicated. As pointed out by Hind (2011), the specimens at herbarium BR usually provide evidence identifying the collectors, since they bear both the labels of the original collector and of the "*Herb. Fl. Bras.*"

Martius's own collections from Brazil are held in the Botanische Staatsammlung München (M), with duplicates at B, BM, BR, G-DC, K, L, LE, P, and W (Urban, 1906; Förther, 1994). Martius's private herbarium (*Herbarium Martii*), estimated to comprise about 300,000 specimens, containing 60,000 species, nearly half of which are Brazilian, was purchased by the Belgian Government for a sum of £1,200, in 1870, to form the basis of a national collection, and is now at the Botanic Garden Meise (BR) (see Eichler, 1869b; Bommer, 1870; Seemann, 1870; Stafleu and Cowan, 1981; Förther, 1994). In Förther (1994), a detailed account on the development and content of Martius's private herbarium and his numerous, fruitless attempts to sell his collections to the Bavarian Government is presented. According to Bommer (1870), these efforts of selling the private herbarium to the Bavarian Kings, Maximilian II and his successor Ludwig I, were unsuccessful because Bavaria already had the Brazilian herbarium formed by Martius and Spix. However, Martius's strained relationship with King Maximilian II might help to partially explain the king's refusal to buy the collections. The king had refused to increase Martius's starting salary since his initial appointment in 1836 to succeed Schrank as the first curator of the Munich Botanical Garden (see Förther, 1994).

The aim of the present study was to review all Lauraceae collections made by Martius in Brazil, updating and commenting their taxonomic status, detailing and clarifying the localities and dates of the collections, as well as indicating all herbaria known to possess their duplicates. Meissner's treatment of the family in Martius's *Flora Brasiliensis* (Meissner, 1866) was taken as a key reference for citing the material collected by Martius along with the specimens examined and available from other collectors.

This study is based on herbarium material from the herbaria A, AWH, B, BC, BM, BR, C, CGE, COL, E, F, FI, G, G-DC, GH, GOET, GZU, HAL, HBG, HRCB, JE, K, KIEL, KR, L, LE, LINN, LISU, LZ, M, MA, MEL, MO, NY, OUPR, OXF, P, S, SBT, STR, TO, TUB, U, US, VT, W, and WRSL (herbarium acronyms according to Thiers, [continuously updated]). "Original material," indicated within the text, relies on Art. 9.2 & 9.3 ICN (McNeill et al., 2012). All species names and their taxonomic treatment were checked in the classical taxonomic works on Lauraceae, such as those by Nees von Esenbeck (1833, 1836, 1848), Meissner (1864), and Mez (1889), as well as in the more recent published or available revisions: *Aiouea* Aubl. and *Aniba* Aubl. (Kubitzki and Renner, 1982), *Cassytha* L. (Weber, 1981), *Cinnamomum* Schaeff. (Lorea-Hernández, 1996), *Cryptocarya* R. Br. (Kostermans, 1937, 1938a; Moraes, 2005, 2007), *Dicypellium* Nees & Mart., *Phyllostemonodaphne* Kosterm., *Systemonodaphne* Mez and *Urbanodendron* Mez (Rohwer, 1988), *Endlicheria* Nees (Chanderbali, 2004), *Licaria* Aubl. (Kostermans, 1936; Kurz, 2000), *Nectandra* Rol. ex Rottb. (Rohwer, 1993), *Ocotea* Aubl. (Rohwer, 1986), and *Persea* Mill. (Kopp, 1966).

AN ANNOTATED LIST OF LAURACEAE COLLECTED BY MARTIUS OR ATTRIBUTED TO HIM

1. *Aiouea laevis* (Mart.) Kosterm., Recueil Trav. Bot. Néerl. 35: 84. 1938 = *Aiouea brasiliensis* Meisn. in DC., Prodr. 15(1): 83. 1864, *nom. illegit.*; *ibid.* in Martius, Fl. Bras. 5(2): 170. 1866; Mez, Jahrb. Königl. Bot. Gart. Berlin 5: 43. 1889; Moraes, Harvard Pap. Bot. 17(1): 189. 2012; *ibid.* in Pl. Ecol. Evol. 146(3): 361. 2013.

Basionym: *Cryptocarya laevis* Nees ex Mart., Flora 21(2, Beibl.): 64. 1838; Meissner in DC., Prodr. 15(1): 83. 1864; *ibid.* in Martius, Fl. Bras. 5(2): 170. 1866; Renner, Fl. Neotrop. Monogr. 31: 109. 1982. TYPE: BRAZIL. Rio de Janeiro, "Crescit in sylvis Caa-poera dictis ad Sebastianop.", 12 June 1817, *Martii Herbar. Flora Brasil. N° 237* (Holotype: BR 0000008686169 [annotated by Nees as "Cryptocarya pyriformis levis N. ab. E."]; Isotypes, AWH 28362, AWH 28363, B[†] [F neg. 3782], BM 000894059, BR 0000008685834, E 00259412, FI 005252, G, G 00021045, G 00021046, G 00021047, G-DC 00200460, GH 00041126, HAL 0101918, JE 00004805 [and probably JE 00000523, ex Herbar. Bernhardi, *Anonymous s.n.*], K 000512712, K 000512713, K 000512714, KR, L 0035524, L 0035525, LE 00000096, LE 00000135, LZ[†], M 0111049, M 0111050, M 0111051, M 0111052, MO 247250, NY 00354800, P 00128383, P 00128384, W[†], WRSL).

As results, we show below that Martius collected 57 currently accepted species of Lauraceae, 55 of which are native to Brazil (not introduced or subspontaneous). Taking into account the synonyms involved, among the 99 different collections gathered by Martius, 26 are holotypes, 23 are lectotypes, and 30 are syntypes of names of the corresponding taxa, i.e., the vast majority are nomenclatural types. These numbers alone would be enough to demonstrate the importance of the Lauraceae collections that Martius gathered in Brazil over the three years of his expedition with Spix. However, when comparing the expedition of Spix and Martius with what is known about those of other naturalists who visited Brazil in the early 19th century (see Mez, 1892, for a list of collectors and their numbered collections of Lauraceae), it is evident that just Friedrich Sellow (1789–1831) and Ludwig Riedel (1791–1861), who remained in Brazil for much longer, would have surpassed Martius in number of species collected for the family. Sellow collected in Brazil, from 1814 to 1831, a total of 61 currently accepted species of Lauraceae (Moraes, 2008). Riedel, in turn, came to Brazil in 1821 and remained in the country until his death in 1861. His collection period was from 1821 to 1836, in which he collected 92 species of Lauraceae (Moraes, 2012a, b).

For convenience, the current accepted names of species are listed in alphabetic order. Accepted names appear in ***boldface italics***, synonyms in *italics*. Homotypic synonyms are indicated by "≡," while the heterotypic are under the entries "Synonym" or "Synonyms." Whenever available, barcode numbers are quoted with the herbarium acronyms. An Index to Scientific Names and an Index to Collections are provided at the end.

Synonyms: *Aiouea brasiliensis* Meisn. var. *attenuata* Meisn. in DC., Prodr. 15(1): 83. 1864; *ibid.* in Martius, Fl. Bras. 5(2): 170. 1866 = *Aiouea riedelii* Mez, Jahrb. Königl. Bot. Gart. Berlin 5: 37. 1889, *nom. illegit. superfl.* TYPE: BRAZIL. Loco haud indicato, s.d., L. Riedel s.n. (Holotype: LE; Isotypes, B[†] [F neg. 3788], G 00020674, GOET [2 sheets], K 000601965, L 0035527, LE [2 sheets], NY 00354799). Specimen: BRAZIL. Bahia, Ilhéus, "ad ripas fluvi Itahype" [Rio Itaípe], March 1822, L. Riedel 688 (LE n.v.).

For a complete list of synonyms, see Kubitzki and Renner (1982).

None of the located specimens of *Martii Herbar. Flora Brasil. N° 237* bears information on who the collector is, even in BR. Nonetheless, it has been wrongly attributed to Martius by Kubitzki and Renner (1982). In fact, once Martius (1838) had indicated the gathering as from June, in Rio de Janeiro, this excluded him as the collector, since he has arrived in Rio de Janeiro in July 1817. From information on the sites and dates of the collections reported by Martius in *Herbarium Flora Brasilensis*, and based on the respective specimens located in BR, the most likely collector of the present species would be Bernhard Luschnath. As pointed out by Moraes (2012: 189), in Martius's *Flora Brasilensis*, Meissner (1866: 170) mistakenly attributed to Martius the collection of Riedel 688 from Rio Itaípe.

2. *Aniba canellilla* (Kunth) Mez, Jahrb. Königl. Bot. Gart. Berlin 5: 53. 1889; Kostermans, Recueil Trav. Bot. Néerl. 35: 898. 1938; Kubitzki, Fl. Neotrop. Monogr. 31: 79. 1982; Rohwer, Mitt. Inst. Allg. Bot. Hamburg 20: 13, 111. 1986; Moraes, Harvard Pap. Bot. 17(1): 190. 2012.

Basionym: *Cryptocarya canellilla* Kunth in Humboldt, Bonpland and Kunth, Nov. Gen. Sp. (quarto ed.) 7: 192, t. 645. 1825. Lectotype (designated by Kostermans, 1938b: 899): VENEZUELA. “crescit ad orientem Esmeraldæ, in monte de la Canelilla, juxta ripam Cauræ et erekvati; item prope catarractam Maypurensium,” s.d., immat. fr., F. W. H. A. von Humboldt & A. J. A. Bonpland 1018 (B-W 07784 00 0 & B-W 07784 01 0 [“*Laurus canellilla* Willd.”] herbarium name, “Orinoco”]; Isolectotypes, P 00307242 [F neg. 35005], P 00506929).

Synonyms: *Cryptocarya pretiosa* Mart. in Buchner, Repert. Pharm. 31: 356. 1829, *syn. nov.* = *Mespilodaphne pretiosa* Nees & Mart., Linnaea 8: 45. 1833, *nom. illegit. superfl.*; Martius, Syst. Mat. Med. Bras.: 111. 1843; ibid. in Fl. Bras. 5(2): 317. 1868 = *Mespilodaphne pretiosa* Nees & Mart. var. *angustifolia* Nees, Syst. Laur.: 237. 1836, *nom. invalid.*; Meissner in DC., Prodr. 15(1): 103. 1864; ibid. in Martius, Fl. Bras. 5(2): 198–199. 1866; Moraes, Komarovia 6(1): 16. 2008. LECTOTYPE (designated here): BRAZIL. Pará, “in sylvis ad oppidum Pará rarius, frequentius in Provinciae Paraensis interioribus,” 1819, immat. fr., C. F. P. von Martius s.n. (M 0121069 [“*Cryptocarya pretiosa* Mart.”] “Páo v. Casca preciosa Lusitan.”]). Original material: BRAZIL. Pará, s.d., immat. fr., C. F. P. von Martius s.n. (M 01121070 [fragment], M 0121071, M 0121072, MEL 2318499); idem, “ad fluvium Rio Negro,” s.d., immat. fr., C. F. P. von Martius s.n. (G, MEL 2318499); idem, Amazonas, “inveni prope praedium Capitany in prov. Alto Amaz..,” 1819, immat. fr., C. F. P. von Martius s.n. (BR 0000008685865 [“*Laurus pretiosa*,” herbarium name]).

For a complete list of synonyms, see Kubitzki and Renner (1982).

Vernacular names: “Casca preciosa” (Martius, 1829), “Pereiorá Tupin.,” “Páo v. Casca pretiosa” (Martius, 1843, 1868).

Hitherto, the name *Cryptocarya pretiosa* Mart. has been interpreted as a herbarium name mentioned in the synonymy of *Mespilodaphne pretiosa* Nees & Mart. var. *angustifolia* Nees as “*Cryptocarya pretiosa* Mart. in Herb. Brasil. Monac.” (Nees von Esenbeck, 1836), therefore being overlooked by Nees as already published by Martius (1829).

Moraes (2008) pointed out that, as indicated by Rohwer (1986: 13, 111, 229), the name *Mespilodaphne pretiosa* Nees & Mart. is superfluous, thus illegitimate, since *Laurus quixos* Lam., Encycl. 3: 455. 1792 was cited as a synonym {= *Ocotea quixos* (Lam.) Kosterm., Recueil Trav. Bot. Néerl. 35: 900. 1938. TYPE: [ECUADOR] “ex Provincia de los Canelos in Peru,” “Provincia Riobaruba,” 12 April 1748, sterile, Joseph de Jussieu s.n. (Holotype: P-JU 00307277 [Cat. No. 4245]); Isotype, P-LA 00381527, sterile.; see Rohwer, 1986: 229, 249; 1993: 297–298]}.

The earlier name *Laurus quixos* was not included in a subordinated taxon under *Mespilodaphne pretiosa*, so the latter name should be automatically typified by the type of the first one (Art. 7.5). The name *Ocotea pretiosa* Mez, Jahrb. Königl. Bot. Gart. Berlin 5: 250. 1889, based on *Mespilodaphne pretiosa* Nees & Mart. with exclusion of its variety *angustifolia* Nees (with *Laurus quixos* in synonymy) is therefore legitimate. The former name in sense of Mez is *Ocotea odorifera* (Vell.) Rohwer, Mitt. Inst. Allg. Bot. Hamburg 20: 111. 1986. Another name, *Aydendron suaveolens* Nees, Linnaea 8: 37. 1833, which was included by Mez into the concept of *Ocotea pretiosa* does not make the new name illegitimate because the combination *Ocotea suaveolens* (Meisn.) Benth. ex Hieron., Bol. Acad. Nac. Ci. 4: 437. 1881 (= *Oreodaphne suaveolens* Meisn. in DC., Prodr. 15(1): 136. 1864) was already published to that date. The combination “*Ocotea pretiosa* Benth. et Hook. f.” recorded in *Index Kewensis* has not been validly published by Bentham in Bentham and Hooker (1880: 158), being substituted by the phrase “species typica generis” without any nomenclatural status under the ICN (Art. 35.2).

Martius (1843a), in his *Systema materiae medicae vegetabilis brasiliensis*, cited the existence of several lithograph plates that were already finished from his book that was never published, “*Plantae Medicae et Oeconomicae Brasiliae*” (Mart. Pl. med. et oec. Br. ined.), with the plate 33 being indicated for *Mespilodaphne pretiosa* Nees & Mart. Meissner (1866: 301–302) also mentioned this unpublished book as “*Tabulas LXVI. LXX. XCV. XCVI. CI. CII. receptae sunt e Martii opere inedito: Plantae medicinales et oeconomiae Brasilienses*” and used those Martius’s plates in his monograph, which were acknowledged as “*Tabula nostra [...] ex Martii Pl. med. et oec. Bras. ined. recepta*” (for *Aydendron cujumary* [Tabula LXVI], *Mespilodaphne opifera* [LXX], *Nectandra puchury-major* [XCV], *Nectandra cymbarum* [XCVI], *Nectandra puchury-minor* [CI], and *Dicyphellum caryophyllaceum* [CII]). However, for “*Mespilodaphne pretiosa* Meissn.,” Meissner only quoted “*Tabula nostra LXXIV*,” therefore evidencing that another plate was prepared for the species in question. Actually, plate 74 in *Flora Brasiliensis* refers to *Ocotea odorifera* (Vell.) Rohwer, which most likely was based on Riedel’s collection from “Mandioca,” since it is the only flowering material among the collections cited by Meissner (see Moraes, 2012b).

3. *Aniba citrifolia* (Nees) Mez, Jahrb. Königl. Bot. Gart. Berlin 5: 74. 1889; Kostermans, Recueil Trav. Bot. Néerl. 35: 890. 1938; Kubitzki, Fl. Neotrop. Monogr. 31: 23. 1982; Moraes, Harvard Pap. Bot. 17(1): 191. 2012.

Further information in Moraes (2005, 2007).

Vernacular name: “Noz mocada do Brazil” (Martius, 1843, 1868).

Originally, *Cryptocarya moschata* was based on two collections, a fruiting one by Martius and a flowering one by Sellow. Unfortunately, these collections represent different taxa, which had not been acknowledged either by Meissner or by Mez. The lectotypification of *C. moschata* in the sense of the Martius collection was done by Kostermans (1937). He proposed the specimen of Martius as (lecto)type, without analyzing it, based on the description of Nees von Esenbeck and solely on the available specimen of Sellow in hand. Later (Kostermans, 1938a), after studying the specimen of Martius, he was “obliged to alter the synonymy” of *C. moschata* as “it proved to have pilose leaves,” justifying his earlier decision in favor of the Martius collection because “...as the description of Nees refers especially to this species and not to that of Sellow...” However, contrary to Kostermans’s statement, Nees’s paper deals mainly with the Sellow collections at Berlin (*Revisio Laurinarum a b. Sellowio in Brasilia collectarum et iam in Herbario Regio Berolinensi asservatarum*), from which the protologue allowed a clear decision (see below) on which material the species was primarily described [see also Rohwer, 1993b in his lectotypification of *Nectandra leucantha* Nees & Mart., Linnaea 8: 48. 1833]. In Moraes (2005), after studying both syntypes, he has concluded that the Martius collection was in conflict with the protologue, while the Sellow one was not and, therefore he selected a specimen of the Sellow collection as lectotype. According to the original diagnosis, which is not much elucidative, *C. moschata* has “foliis ovali-oblongis brevi-cuspidatis utrinque reticulatis glabris concoloribus, pedunculis axillaribus petiolo paulo longioribus paucifloris, fructu obovato umbonato costato.” The Sellow collection has leaves ovate-oblong, short-cuspidate, on both surfaces reticulate, glabrous, concolor, whereas the Martius collection has leaves ovate-oblong, acute to pointleted, on both surfaces reticulate, but pubescent on the lower surface, discolour (brownish and shining above, somewhat olive-green and dull below). Still, the specimen of Sellow has short peduncles, slightly longer than petioles, whereas the specimen of Martius has peduncles considerably longer than petioles, and fruits umbonic-ovoblate, ribbed. Other authors might reject Moraes’s supersession of the existing lectotype, with the allegation that “the specimen chosen by Kostermans as lectotype is not in ‘serious’ conflict with regards to the protologue,” since the main evidence relies on the leaf pubescence. In fact, as pointed out by Moraes, according to the protologue

C. moschata is a glabrous species, which was clearly based on the *Sellow* collection. This indument character, or its absence, plays a major part in the delimitation of *Cryptocarya moschata* in the sense of *Sellow*'s syntype and *C. mandiocana*, the species represented by *Martius*'s collection. If the lectotypification of *C. moschata* in the sense of the *Martius* collection would not be rejected for the reasons explained, it will be necessary to coin a new name for the distinctive entity represented by *Sellow*'s collection. Unfortunately, in Moraes's lectotypification he selected the specimen preserved at LE as the lectotype, reasoning that it was the only material, from the available isosyntypes he had accessed, that still had a flower. Only later he found out that CGE houses a duplicate of *Sellow*'s syntype still bearing three flowers, which would be the best choice.

In *Martius* (1843a: 110), the plate 105 was indicated for “*Cryptocarya moschata* Mart.” (see entry 2; present work). However, in *Meissner* (1866: 164), he has only quoted “*Tabula nostra LVI*,” thus evidencing that another plate was prepared for this species. Although *Kostermans* (1937, 1953, 1964) had also cited plate 105 under *C. moschata* Nees & Mart., this manuscript has not been found within the reliquiae of *Martius* either at the Bayerische Staatsbibliothek (Abteilung fuer Handschriften und Seltene Drucke) or at the library of the Botanische Staatsammlung München. *Wuschek* (1989), in his treatment of *Martius*'s *Systema materiae medicae*, did not mention the unpublished manuscript, either.

The illustration of *Cryptocarya moschata* in *Flora Brasiliensis* (*Meissner*, 1866; plate 56) was delineated from different flowering and fruiting material, based on the specimens analyzed and cited by *Meissner*. In this sense, only the flowering habit and the flower pieces can be ascribed to *C. moschata* Nees & Mart., since they were drawn from either *Sellow*'s or *Widgren*'s collections. On the other hand, the fruiting elements of the plate could be either ascribed to *C. mandiocana* (from *Martius* s.n.), *C. riedeliana* P.L.R. *Moraes* (from *Riedel* 485), or to *C. guianensis* Meisn. (from *Martin* s.n.). However, judging from the outlined shape of leaves and fruits, it would be proved that they were based on *Martius*'s collection.

Another manuscript of *Martius* (1843b), which is kept at the University of California at Los Angeles Library (Louise M. Darling Biomedical Library), is a bound volume that has a simple bookplate stating: “*E Bibliotheca C. Ph. F. Martii*.” Additionally it is stamped: “Urban Library 1933.” The holographic titlepage reads: “*Plantae medicinales Florae Brasiliensis secundum Ordines naturales dispositae*,” “1843. 10. Junii.” The second leaf of the work has a handwritten note: “Conferenda haec flora medica Brasil. cum Schöpfii flora med. Amer. bor., cum Lunan Jamaic.,” likely referring to a comparison among the *Flora Medica* of Brazil (probably from *Martius*'s *Systema materiae medicae vegetabilis brasiliensis*), Johann David Schöpf's *Materia medica americana* (1787), and John Lunan's *Hortus Jamaicensis* (1814). Leaf 3–5 present a holographic list of plants arranged by family and genus and species. Leaf 6 begins as a numbered Leaf 1, after that each opening (left page and right page facing) is numbered on the right leaf. There are 80 openings and the left side of the opening is

blank or contains handwritten notes made by *Martius* relating to some of the printed text, which has been cut from some other book and pasted on the right hand side. Regarding the species of Lauraceae, all the 11 species treated in *Syst. mat. med. bras.* compose the printed matter, with a different order of entries of the species from the former. Additionally, there are handwritten notes about *Silvia navalium* Allemão [= *Mezilaurus navalium* (Allemão) Taub. ex Mez], and “*Nectandra rodigiae Schomb.*” [= *Nectandra rodioei* R.H. Schomb. = *Chlorocardium rodiei* (R.H. Schomb.) Rohwer, H.G. Richt. & van der Werff]. The clipped printed text of *Cryptocarya moschata* Mart. is pasted on the numbered leaf 16.

Synonymy in Rohwer (1993).

18. *Nectandra canescens* Nees & Mart. in Nees, Linnaea 8: 47. 1836; ibid. in Syst. Laur.: 280. 1836; ibid. in Linnaea 21: 501. 1848; Meissner in DC., Prodr. 15(1): 147. 1864; ibid. in Martius, Fl. Bras. 5(2): 251. 1866; Mez, Jahrb. Königl. Bot. Gart. Berlin 5: 408. 1889; Rohwer, Mitt. Inst. Allg. Bot. Hamburg 20: 51. 1986; ibid. in Fl. Neotrop. Monogr. 60: 274. 1993; Moraes, Komarovia 6(1): 23. 2008; ibid. in Harvard Pap. Bot. 17(1): 199. 2012; ibid. in Pl. Ecol. Evol. 146(3): 369. 2013. Lectotype (designated by Rohwer, 1993: 274): BRAZIL. Pará, “in sylvis secus fl. Amazonum, Provinciae Paraënsis et RN,” 20 October 1819, fl., immat. fr., *C. F. P. von Martius Martius Obs. 2750*: “Pomatium canescens ... arbor 15–20 ped. ... In silvis ad marginem fl. Amazonum” (M 0112453 [annotated by Martius as “*Persea canescens*”, and by Nees as “*Pomatium canescens*”, herbarium names]; Isolectotypes, GZU 000254254 [annotated by Nees as “*Pomatium canescens* M. / in sylvis secus flumen Amazonum Provinciae Paraensis. Sept. et Oct.; in sylv. Ad fluv. Madeiram Prov. Fluminis Nigri Aprili / a Martius”], M 0112458, M 0112459). Specimen: BRAZIL. Amazonas, “in sylvis ad fluv. Madeira,” April 1820, sterile, *C. F. P. von Martius s.n.* (B 10 0185095 [F neg. 3750]).

Synonymy in Rohwer (1993) and Moraes (2012a).

The other syntype of *Nectandra canescens* Nees & Mart. is the gathering by “Sellow B 433 c 410”, which is the type of *Nectandra rigida* (Kunth) Nees var. *canescens* Mez, Jahrb. Königl. Bot. Gart. Berlin 5: 407. 1889. According to Rohwer (1993: 288), although *N. rigida* var. *canescens* is based on the Sellow syntype of *N. canescens* Nees & Mart., it has to be treated as a new variety and not as a combination based on *N. canescens*, because Mez accepted *Nectandra canescens* in the sense of its Martius syntype in the same publication.

19. *Nectandra cuspidata* Nees & Mart. in Nees, Syst. Laur.: 330. 1836; Meissner in DC., Prodr. 15(1): 159. 1864; ibid. in Martius, Fl. Bras. 5(2): 268, t. 97. 1866; Mez, Jahrb. Königl. Bot. Gart. Berlin 5: 449. 1889; Rohwer, Fl. Neotrop. Monogr. 60: 100. 1993 = *Nectandra membranacea* (Sw.) Griseb. ssp. *cuspidata* (Nees & Mart.) Rohwer, Mitt. Inst. Allg. Bot. Hamburg 20: 72. 1986; Moraes, Pl. Ecol. Evol. 146(3): 369. 2013. Lectotype (designated by Rohwer, 1993: 100): BRAZIL. Amazonas, Tefé, “in ripa fluminis Amazonum, praesertim ad villam Ega,” January 1820, fl., fr., *C. F. P. von Martius s.n.* (M 0147303; Isolectotypes, B 10 0086138, GZU 000254262, L 0037121, L 0037122 [“*Laurus cuspidata* M. / R. Amazon.”, herbarium name], L 1802480 [“*Laurus egensis* Mart.”, herbarium name, “Prov.

Rio Negro”], M 0147304). Syntypes: BRAZIL. Amazonas, Rio Japurá, “in sylvis Japurensibus,” January 1820, fl., fr., *C. F. P. von Martius s.n.* (GZU 000254262, M 0147302, M 0147306); BRAZIL. P. von Martius s.n.* (Holotype: M 0111065 [annotated by Martius as "[Laurus] Persea sarcocalyx," herbarium name]; Isotype, GZU 000254287 [annotated by Nees; fragment]).

Further synonymy in Rohwer (1993), and Moraes (2012a).

Rohwer (1993: 181) designated the collection *Martii Herbar. Flora Brasil. N° 1239* as the lectotype of *Nectandra nitidula* Nees & Mart. var. *maior* Nees. However, this collection refers to a gathering undertaken by Peter Claussen in Cachoeira do Campo, Minas Gerais, in August 1839, which therefore is not an original material for the lectotypification of the variety named by Nees von Esenbeck.

25. *Nectandra oppositifolia* Nees & Mart. in Nees, Linnaea 8: 47. 1833; *ibid.* in Syst. Laur.: 279. 1836; Meissner in DC., Prodr. 15(1): 146. 1864; *ibid.* in Martius, Fl. Rio de Janeiro/São Paulo, "in sylvis subalpinis alt. 1500 pedum supra Serra do Mar", December 1817, immat. fr., *C. F. P. von Martius* Obs. 411: "Arbor 30 ped. Flores in racemis 6–8. In alpinis alt. 1500" (GZU 000260031, M 0121034). Specimen: BRAZIL. São Paulo, Iperó, "in sylv. primaevis ad Ypanema," January 1817, sterile, *C. F. P. von Martius* s.n. (M 0121033 [annotated by Rohwer as "probabiliter *Nectandra* aff. *psammophila* Nees vel *N. megapotamica* (Spr.) Mez"]]).

Further synonymy in Rohwer (1993).

Specimens at K 000642237 and K 000642238 have *Herbarium Martii* labels, typically printed with "Communic182..." and handwritten with "Martius" and "7" (i.e. "Communicavit Martius 1827"). Moraes et al. (2013), and in subsequent papers, have reported part of the sets of Brazilian plants that Martius distributed in 1827 to several European herbaria and correspondents, particularly concerning the sets received by Luigi Colla and published in *Herbarium Pedemontanum*. In those papers, it has been demonstrated that most of the specimens communicated by Martius in 1827 came from collections of Prince Maximilian zu Wied, from evidence of the localities (toponyms) indicated on labels, being the same as those visited by Wied in Brazil, and from matching of the specimens distributed by Martius with those that are clearly attributed to Wied. In the present case, the specimen at K 000642237 closely matches Wied collections at BR and MEL, while the one at K 000642238 closely matches the collections at B, GOET, and GZU. Collections from Ilhéus and Rio de Contas can be attributed either to Martius or to Wied, since both visited these localities.

27. *Nectandra puberula* (Schott) Nees, Syst. Laur.: 332. 1836; Rohwer, Mitt. Inst. Allg. Bot. Hamburg 20: 58. 1986; *ibid.* in Fl. Neotrop. Monogr. 60: 220. 1993; Moraes, Harvard Pap. Bot. 17(1): 202. 2012.

Basionym: *Persea puberula* Schott in Sprengel, Syst. Veg. (ed. 16) 4(2): 405. 1827. TYPE: BRAZIL. Rio de Janeiro, loco haud indicato, s.d., *H. W. Schott* s.n. (Holotype: B 10 0185167 [B neg. 5200, ex Herb. Sprengel nr. 40]; Isootypes, GZU 000254414, and probably P 00711066, P 00711067).

Luschnath s.n.* (BR 0000008808042).

Further synonyms in Rohwer (1993), and further information on the priority of Ruiz and Pavón’s name over Kunth’s name in Moraes (2012, 2013).

As pointed out by Moraes (2012a), Rohwer (1993) indicated that *Martii Herbar. Flora Brasil. N° 420* would probably be the same collection of *Martius s.n.*, collected in Cachoeira. However, Martius (1837–[1841]; 1841: 7) clearly indicated “420. *Oreodaphne dispersa* Nees ab Esenb. Laur. 427 var. *grandifolia* ? ipso definierte. ... In silvis ad Ilheos. Aprili. *Dryas*,” which does therefore represent a different collection gathered by Luschnath.

29. *Nectandra reticulata* (Ruiz & Pav.) Mez, Jahrb. Königl. Bot. Gart. Berlin 5: 404. 1889; Rohwer, Fl. Neotrop. Monogr. 201: 276. 1993; Moraes, Komarovia 6(1): 24. 2008; ibid. in Harvard Pap. Bot. 17(1): 203. 2012; ibid. in Pl. Ecol. Evol. 146(3): 370. 2013.

For a complete list of probable synonyms, see Rohwer (1986).

Rohwer (1986) has circumscribed *Ocotea cernua* (Nees) Mez in a very broad sense. Once confirmed that the taxa described and collected by Ruiz & Pavón in Peru are the same as the one described by Nees from collections of

Sieber “Flora Martinicensis & Mixta”, *Ocotea leptobotra* (Ruiz & Pav.) Mez must be the correct name for having priority (see Moraes, 2012b, 2013).

34. *Ocotea citrosmoides* (Nees) Mez, Jahrb. Königl. Bot. Gart. Berlin 5: 349. 1889; Rohwer, Mitt. Inst. Allg. Bot. Hamburg 20: 174. 1986.

Basionym: *Oreodaphne citrosmoides* Nees, Syst. Laur.: 384. 1836; Meissner in DC., Prodr. 15(1): 122. 1864; ibid. in Martius, Fl. Bras. 5(2): 217. 1866. TYPE: BRAZIL. Minas Gerais, Sabará, “in sylvis caeduis prope Sabará,” May 1818, fl. ♂, *C. F. P. von Martius Obs.* 1223: “Arb. parva ramio paucis patul. Flores, qui in siccis examinandi, pall. ochroleuco-viridialbi, anth. tandem nigrescentibus. Prope Sabará” (Holotype: M 0111194; Isotypes, GZU 000254343, M 0111193).

35. *Ocotea complicata* (Meisn.) Mez, Jahrb. Königl. Bot. Gart. Berlin 5: 247. 1889; Rohwer, Mitt. Inst. Allg. Bot. Hamburg 20: 109. 1986; Moraes, Harvard Pap. Bot. 17(2): 248. 2012.

Basionym: *Mespilodaphne complicata* Meisn. in DC., Prodr. 15(1): 103. 1864; ibid. in Martius, Fl. Bras. 5(2): 199. 1866. Lectotype (designated by Assis and Mello Silva, 2010: 378): BRAZIL. Bahia, Ilhéus, “in sylv. arenosis maritimis pr. Ilheos,” May 1822, *L. Riedel* 766 (G 00369363; Isolectotypes, B 10 0185255 [F neg. 3644], F [0061435F, fragment], G [as *Riedel* 776], GOET, K 000575058 [as *Riedel s.n.*], L 0036971 [as *Riedel s.n.*], LE 00000570, NY). Syntype: BRAZIL. Bahia, “in sylvis Catingas ad Sincorá locis altis,” November 1818, fr., *C. F. P. von Martius s.n.* (M 0111195 [F neg. 19271]; “*Ocotea firmula* Mart.,” herbarium name; “*Ayndendron firmulum* Nees,” herbarium name], M 0111196).

As pointed out by Moraes (2012b), Assis and Mello-Silva (2010) reduced *Ocotea complicata* (Meisn.) Mez to synonymy under *O. fasciculata* (Nees) Mez, which is here reiteratively not accepted. The reason is based on differences between both taxa in habit, flower, fruit and vegetative characters, as well as in their habitats.

36. *Ocotea cujumary* Mart. in Buchner, Repert. Pharm. 35: 178. 1830; ibid. in Spix and Martius, Reise Bras. 3: 1128. 1831; Mez, Jahrb. Königl. Bot. Gart. Berlin 5: 286. 1889; Rohwer, Mitt. Inst. Allg. Bot. Hamburg 20: 161. 1986 = *Ayndendron cujumary* (Mart.) Nees, Syst. Laur.: 247. 1836; Martius, Syst. Mat. Med. Bras.: 110. 1843; ibid. in Fl. Bras. 5(2): 318. 1868; Meissner in DC., Prodr. 15(1): 94. 1864; ibid. in Martius, Fl. Bras. 5(2): 185, t. 66. 1866. TYPE: BRAZIL. Amazonas, “in sylvis Japurensibus et ad Ega, tum etiam in carapestribus sylvisque caeduis prope Barra do Rio negro,” December 1819, fr., *C. F. P. von Martius s.n.* (Holotype: M 0121076 [F neg. 6584]; Isotypes, B 10 0185244, M 0121077, NY 00355591 [fragment]).

Complete synonymy in Rohwer (1986).

Vernacular name: “Cujumary” (Martius, 1843, 1868).

37. *Ocotea cymbarum* Kunth in Humboldt, Bonpland and Kunth, Nov. Gen. Sp. (quarto ed.) 2: 166. 1817 = *Nectandra cymbarum* (Kunth) Nees, Syst. Laur.: 305. 1836; Martius, Syst. Mat. Med. Bras.: 111. 1843; Meissner in DC., Prodr. 15(1): 156. 1864; ibid. in Martius, Fl. Bras. 5(2): 265, t. 96. 1866; Mez, Jahrb. Königl. Bot. Gart. Berlin 5: 464. 1889; Rohwer, Mitt. Inst. Allg. Bot. P. von Martius Obs. 1112: "Frutex 4–6 ped. ramis patentibus glab. Serra de Carass." (M 0111038 ["*Ocotea daphnoides* Mart.", herbarium name]; Isolectotypes, GZU 000259998 [fragment], M 0121036, NY 00355742 [fragment]). Syntype: BRAZIL. Minas Gerais, loco haud indicato, s.d. [April], fr., C. F. P. von Martius *s.n.* (B 10 0185347, GZU 000254355 [fragment]) [= *Ocotea odorifera* (Vell.) Rohwer, Mitt. Inst. Allg. Bot. Hamburg 20: 111. 1986].

Oreodaphne nitidula Nees & Mart. in Nees, Linnaea 8: 41. 1833 = *Oreodaphne nitidula* Nees & Mart. var. *lanceolata* Meisn. in DC., Prodr. 15(1): 136. 1864, *nom. invalid.* Lectotype (designated by Moraes, 2008: 53): BRAZIL. Minas Gerais, "editis Serro Frio, ad Tapanhoacanga," May 1818, fl. ♂, C. F. P. von Martius *s.n.* (M 0111039; Isolectotype: GZU 000254358).

Oreodaphne thymelaeoides Nees & Mart. in Nees, Linnaea 8: 42. 1833. Lectotype (designated by Moraes, 2008: 43): BRAZIL. Minas Gerais, Serro, "in Serro Frio," May 1818, fl., C. F. P. von Martius *s.n.* (M 0111037 [annotated by Martius as "*Ocotea daphnoides*", by Nees as "*Oreodaphne angustifolia thymelaeoides* N. ab. Es. / nomen mutandum, ob *Oreod. angustifol.* Schott. in Spr. Cur. post.", and by Meissner as "*Oreodaphne Martiana* Nees β

thymelaeoides

Meissner ipse"]]; Isolectotype, GZU 000254370 [annotated by Nees as "*Oreodaphne angustifolia thymelaeoides* / Serro frio, Prov. Min. / Majo"]).

Further synonyms in Rohwer (1986).

Rohwer (1986) has circumscribed *Ocotea lancifolia* in a broad sense and in such terms that it is still needed to be established whether several of the indicated synonyms really belong to this taxon (i.e., *Ocotea lancifolia*).

In the protologue of *Oreodaphne martiana*, Nees has described a species with flowers and fruits. The specimen at B 10 0185347 (annotated and cited by Mez 1889: 250–251, under *Ocotea pretiosa* Mez) bears a handwritten label by Nees with "*Oreodaphne martiana* N. et M. Var. α / Min. Ger. Apr. / a Mart." However, it is a fruiting specimen which belongs to *Ocotea odorifera* (Vell.) Rohwer, with a duplicate in GZU. Therefore, *Oreodaphne martiana* Nees must be taken only from the flowering material of Martius. Another specimen cited by Mez (1889: 250–251, under *Ocotea pretiosa* Mez), *Martius* "n. 79", has not been located so far.

43. *Ocotea laxa* (Nees) Mez, Jahrb. Königl. Bot. Gart. Berlin 5: 381. 1889; Rohwer, Mitt. Inst. Allg. Bot. Hamburg 20: 211. 1986; Moraes, Komarovia 6(1): 8. 2008; ibid. in Harvard Pap. Bot. 17(2): 264. 2012 = '*Persea laxa* Mart. ex Nees', Syst. Laur.: 468. 1836, *nom. invalid.*

Further synonyms in Rohwer (1986).

Vernacular name: “Canella de cheiro” (Martius, 1843, 1868).

Mez (1889), Rohwer (1986), and van der Werff (2002b) have indicated *Ocotea longifolia* Kunth and *O. aurantioidora* (Ruiz & Pav.) Mez as probable synonyms. However, since there is no recent revision of the collections of these taxa (of specimens from Brazil, Colombia, Peru, and elsewhere), we keep here the traditional use of the first name for the Brazilian specimens, indicating the second name as a doubtful synonym. Once the synonymy is confirmed, *Ocotea aurantioidora* must be the correct name to be adopted for being the oldest one (Moraes, 2012b).

45. *Ocotea minarum* (Nees & Mart.) Mez, Jahrb. Königl. Bot. Gart. Berlin 5: 305. 1889; Rohwer, Mitt. Inst. Allg. Bot. Hamburg 20: 148. 1986; Moraes, Komarovia 6(1): 13. 2008; ibid. in Harvard Pap. Bot. 17(2): 256. 2012.

Basionym: *Gymnobalanus minarum* Nees & Mart. in Nees, *Linnaea* 8: 38. 1833; ibid. in *Syst. Laur.*: 480. 1836; Meissner in DC., Prodr. 15(1): 140. 1864; ibid. in Martius, Fl. Bras. 5(2): 242, t. 84. 1866. Lectotype (designated by Rohwer, 1986: 148 [first-step]; second-step lectotype designated by Moraes, 2008: 12): BRAZIL. São Paulo, fl. ♀, *F. Sellow* 5636 (B 10 0000037 [B neg. 5276 B]; Isolectotypes, B 10 0000036, B 10 0000038, VT). Probable isolectotypes, F [0061409F; as *Sellow s.n.*], HAL 0010433 [as *Sellow s.n.*]. Further synonyms and additional information in Rohwer (1986) and Moraes (2008, 2012b).

50. *Ocotea spixiana* (Nees) Mez, Jahrb. Königl. Bot. Gart. Berlin 5: 260. 1889; Rohwer, Mitt. Inst. Allg. Bot. Hamburg 20: 193. 1986 ≡ ‘*Ocotea rufotomentosa* Mart.’, *nomen*.

Basionym: *Oreodaphne spixiana* Nees, Syst. Laur.: 382. 1836; Meissner in DC., Prodr. 15(1): 117. 1864; ibid. in Martius, Fl. Bras. 5(2): 212. 1866. TYPE: BRAZIL. Minas Gerais, Serro, “in sylvis Capões, locis montosis, Serro Frio,” May 1818, fl., *C. F. P. von Martius s.n.* (Holotype: M 0111182 [F neg. 6587]; Isotypes, GZU 000254368, M 0111181 [annotated by Nees as “Aperiphraacta martiana,” herbarium name], M 0111183, M 0111184, NY 00355782 [fragment]).

51. *Ocotea tabacifolia* (Meisn.) Rohwer, Mitt. Inst. Allg. Bot. Hamburg 20: 173. 1986; Moraes, Harvard Pap. Bot. 17(2): 263. 2012.

Basionym: *Persea tabacifolia* Meisn. in DC., Prodr. 15(1): 51. 1864. TYPE: BRAZIL. Minas Gerais, “monte Itambé,” November 1820, immat. fr., *J. B. E. Pohl 3604* (Holotype: W†; Lectotype, designated by Moraes, 2008: 47; NY 00355862).

Synonyms: *Oreodaphne umbrosa* Nees, Syst. Laur.: 388. 1836, non (Kunth) Nees, Syst. Laur.: 456. 1836; Meissner in DC., Prodr. 15(1): 122. 1864; ibid. in Martius, Fl. Bras. 5(2): 216. 1866 ≡ *Ocotea umbrosa* (Nees) Mart. ex Mez, Jahrb. Königl. Bot. Berlin 5: 350. 1889, non Kunth, 1818 ≡ *Oreodaphne minarum* Steud., Nomencl. Bot. (ed. 2) 2: 226. 1841. TYPE: BRAZIL. Minas Gerais, “inter Taparoca et Tapanhoacanga, locis altis sylvaticis,” 13 May 1818, fl. ♂, *C. F. P. von Martius Obs. 1188*: “arbor alt. 10–15 ped. In Capoeira” (Holotype: M 0111067; Isotypes, GZU 000254371 [fragment], M 0111068, MEL 2324416).

Further synonym in Rohwer (1986).

52. *Ocotea teleiandra* (Meisn.) Mez, Jahrb. Königl. Bot. Gart. Berlin 5: 382. 1889 ≡ *Oreodaphne teleiandra* Meisn. in DC., Prodr. 15(1): 138. 1864; ibid. in Martius, Fl. Bras. 5(2): 239. 1866; Rohwer, Mitt. Inst. Allg. Bot. Hamburg 20: 211. 1986; Moraes, Komarovia 6(1): 55. 2008; ibid. in Harvard Pap. Bot. 17(2): 263. 2012.

Basionym: *Teleiandra glauca* Nees & Mart. in Nees, Linnaea 8: 46. 1833. TYPE: BRAZIL. São Paulo, fl. ♂, *F. Sellow 399* (Holotype: B 10 0000045; Isotypes, B 10 0000044, B 10 0000046 [ex Herb. Kunth, B neg. 5322], K 000442012, VT 001553). Probable isotypes:

BRAZIL. Loco haud indicato, fl. ♂, *F. Sellow s.n.* (BR 0000008767165, F [0061819F; fragment], G, GZU 000249332); idem, fl., *F. Sellow s.n.* (HAL 0103829, wrongly mounted with the label of “*Oreodaphne glauca* Nees ab Es.”” written by Schlechtendal).

Synonyms: *Camphoromoea venulosa* Nees, Syst. Laur.: 469. 1836 ≡ *Oreodaphne venulosa* (Nees) Meisn. in DC., Prodr. 15(1): 126. 1864; ibid. in Martius, Fl. Bras. 5(2): 222. 1866 ≡ *Ocotea venulosa* (Nees) Baitello, Fl. Fanerog. Estado São Paulo 3: 208. 2003. TYPE: BRAZIL. São Paulo, “in sylvis Montis formosi” [Morro Formoso, prope Bananal], December 1817, *C. F. P. von Martius s.n.* (Holotype: M 0147133 [F neg. 19278]; Isotype, GZU 000253888).

As pointed out by Moraes (2012b: 264), Rohwer (1986: 211) synonymized *Ocotea teleiandra* (Meisn.) Mez with *Ocotea laxa* (Nees) Mez. However, according to Baitello and Marcovino (2003: 195, 197, 205), although both are similar in vegetative characters, *O. teleiandra* may be distinguished by tepals thick and papilose in the inner surface, leaves glabrous abaxially, absence of bullate and barbellated domatia, and larger fruits with cupule of smooth margin, whereas *O. laxa* has leaves pubescent abaxially, with conspicuous domatia, and fruits with hexalobed cupules.

53. *Ocotea tristis* (Nees & Mart.) Mez, Jahrb. Königl. Bot. Gart. Berlin 5: 316. 1889; Rohwer, Mitt. Inst. Allg. Bot. Hamburg 20: 167. 1986; Moraes, Komarovia 6(1): 43. 2008; ibid. in Harvard Pap. Bot. 17(2): 264. 2012 ≡ *Mespilodaphne tristis* Meisn. in DC., Prodr. 15(1): 100. 1864; ibid. in Martius, Fl. Bras. 5(2): 193, t. 69. 1866 ≡ *Oreodaphne tristis* Nees & Mart. var. *oblongifolia* Nees & Mart. in Nees, Linnaea 8: 40. 1833, *nom. illegit. superfl.*, = var. *tristis*.

Basionym: *Oreodaphne tristis* Nees & Mart. in Nees, Linnaea 8: 40. 1833. Lectotype (designated by Moraes, 2008: 45): BRAZIL. Minas Gerais, Serro, “Serro Frio,” “*Ocotea tristis* s. Aeneae (Virg. VI.) 493.) In campis tristibus, ubi animae illorum, quos amor peredit...,” May 1818, fl., *C. F. P. von Martius s.n.* (M 0111177).

Further synonyms and detailed information in Rohwer (1986) and Moraes (2008, 2012b).

54. *Ocotea variabilis* (Nees) Mez, Jahrb. Königl. Bot. Gart. Berlin 5: 288. 1889; Rohwer, Mitt. Inst. Allg. Bot. Hamburg 20: 189. 1986 ≡ ‘*Ocotea variabilis* Mart. ex Nees’, Syst. Laur.: 429. 1836, *nom. invalid.*

Basionym: *Oreodaphne variabilis* Nees, Syst. Laur.: 429. 1836; Meissner in DC., Prodr. 15(1): 116. 1864; ibid. in Martius, Fl. Bras. 5(2): 211. 1866. TYPE: BRAZIL. Minas Gerais, Serro, “in campestribus altis Serro Frio,” May 1818, *C. F. P. von Martius s.n.* (Holotype: M 0121081 [F neg. 6588]; Isotypes, B 10 0185417 [F neg. 3737], GZU 000254373, L [“*Laurus adamantina* M.”] herbarium name, “Diam. District,” ex Herbarium Reinwardtianum], M 0121082, MEL 2324404 [“*Laurus adamantina* Mart.”] herbarium name, “Serro Frio”).

Although Rohwer (1986) had proposed *Ocotea variabilis* as a synonym of *Ocotea lancifolia* (Schott) Mez, their fruits are different, mainly in relation to the cups, being cupola-shaped, with simple margin, without remnant tepals in the former, and dish-shaped, with double margin, and with remnant tepals in the latter, making it possible to distinguish and take them as belonging to different taxa.

55. *Ocotea velutina* (Nees) Rohwer, Mitt. Inst. Allg. Bot. Hamburg 20: 172. 1986; Moraes, Komarovia 6(1): 47. 2008.
Basionym: *Oreodaphne velutina* Nees, Syst. Laur.: 386. 1836; Meissner in DC., Prodr. 15(1): 132. 1864; ibid. in Martius, Fl. Bras. 5(2): 231, t. 79. 1866; Mez, Jahrb. Königl. Bot. Gart. Berlin 5: 348. 1889. Lectotype (designated by Rohwer, 1986: 172): BRAZIL. Minas Gerais, “in Sumo Brasiliæ Monte Itambé, Serro Frio,” May 1818, fl. ♀-♂, C. F. P. von Martius s.n. (M 0121084 [annotated by Martius with “*Ocotea velutina*” and by Nees as “*Aperiphacta velutina*”]; Isolectotypes, GZU 000254374 [ex Herb. Nees, annotated by Nees as “*Aperiphacta velutina*,” “hermaphr.-fem.”, “In summo Bras. Monte Itambé Serro Frio... Maio”], GZU 000254375 [fragments]). Syntypes: BRAZIL. Minas Gerais, “in montosis sylvaticis prope Taparaoca präd. Serro Frio,” May 1818, fl. ♀-♀, C. F. P. von Martius Obs. 1183: “arbor 15–20 ped. ram. paucis distantibus, ...” (GZU 000260730 [fragment], M 0121085); BRAZIL. Minas Gerais, loco haud indicato, s.d., fl., C. F. P. von Martius s.n. (M 0121086); BRAZIL. São Paulo, Iperó, “Ypanema,” fr., F. Sellow B 1384 c 419 (B 10 0185416 [NY neg. 8383]); BRAZIL. São Paulo, “a S. Paulo ad meridiem,” fl., F. Sellow 5867 (B 10 0185415 [NY neg. 8384], K 000602367); BRAZIL. São Paulo, F. Sellow 5928 (B[†]); BRAZIL. Loco haud indicato, fr., F. Sellow s.n. (B 10 0185414); idem, fr., F. Sellow s.n. (CGE); idem, fl., fr., F. Sellow s.n. (E 00259499); idem, fr., F. Sellow s.n. (HAL 0010486); idem, fr., F. Sellow s.n. (LE 00006785).

Further synonyms in Rohwer (1986).

56. *Ocotea virgultosa* (Nees) Mez, Jahrb. Königl. Bot. Gart. Berlin 5: 252. 1889; Rohwer, Mitt. Inst. Allg. Bot. Hamburg 20: 226. 1986; ibid. in Fl. Neotrop. Monogr. 60: 301. 1993; Assis and Mello-Silva, Novon 20(4): 379. 2010.
Basionym: *Nectandra virgultosa* Nees, Syst. Laur.: 304. 1836; Meissner in DC., Prodr. 15(1): 167. 1864; ibid. in Martius, Fl. Bras. 5(2): 278. 1866. TYPE: BRAZIL. Minas Gerais, “in sylvulis udis depressis Capões dictis,” s.d., C. F. P. von Martius s.n. (Holotype: M 0121088 [F neg. 19279]; Isotype, GZU 000249348 [fragment]).

57. *Ocotea xanthocalyx* (Nees & Mart.) Mez, Jahrb. Königl. Bot. Gart. Berlin 5: 288. 1889; Rohwer, Mitt. Inst. Allg. Bot. Hamburg 20: 161. 1986.
Basionym: *Nectandra xanthocalyx* Nees & Mart. in Nees, Syst. Laur.: 312. 1836; Meissner in DC., Prodr. 15(1): 167. 1864; ibid. in Martius, Fl. Bras. 5(2): 277. 1866.

TYPE: BRAZIL. Minas Gerais, “inter frutices in planitie Chapada do Paranán,” September 1818, fr., C. F. P. von Martius Obs. 1770: “Frutex 4–6 pedalis, foliis subcomplicatis subtus glauco rore adspersis, calycibus roseo-igneis. In camp. Carrasco” (Holotype: M 0111175 [F neg. 6589]; Isotypes, GZU 000254298, M 0111176).

58. *Persea americana* Mill., Gard. Dict. (ed. 8) s.n. 1768; Kopp, Mem. New York Bot. Gard. 14: 15. 1966; Moraes, Harvard Pap. Bot. 17(1): 204. 2012; ibid. in Pl. Ecol. Evol. 146(3): 372. 2013.

Basionym: *Laurus persea* L., Sp. Pl. 1: 370. 1753. Lectotype (designated by van der Werff, 2002a: 580): “Prunifera arbor, fructu maximo pyriformi viridi, pericarpio esculento butyraceo nucleum unicum maximum nullo ossiculo tectum, cingente. The Avocado or Alegator pear-tree,” in Sloane (1725: 132, t. 222, fig. 2). “Typotype” (original material): JAMAICA. Herb. Sloane Vol. VII: 77 (BM-SL 000594115).

Synonym: *Persea gratissima* Gaertn., Fruct. Sem. Pl. 3: 222, t. 221. 1807, nom. illegit. superfl. for *Persea americana* Mill.; Nees, Syst. Laur.: 128. 1836; Martius, Syst. Mat. Med. Bras.: 26, 112. 1843; ibid. in Fl. Bras. 5(2): 320. 1868; Meissner in DC., Prodr. 15(1): 52. 1864; ibid. in Martius, Fl. Bras. 5(2): 158, t. 105, fig. 1. 1866; Mez, Jahrb. Königl. Bot. Gart. Berlin 5: 145. 1889. Specimen: BRAZIL. Pará, “circa Pará,” “in sylvis archipelagi Insularum Paraënsium,” August 1819, C. F. P. von Martius s.n. (GZU 000254384, M).

Further list of synonyms in van der Werff (2002a).

As pointed out by van der Werff (2002a), Kopp (1966: 17) designated the description in Clusius (1601: 2) as lectotype of *Laurus persea*. However, since descriptions are not accepted as lectotypes, according to Art. 8.1 of ICN (McNeill et al., 2012), the illustration in Sloane (1725) has been designated as lectotype of *Laurus persea* L. and, therefore of *Persea americana* Mill.

59. *Persea rufotomentosa* Nees & Mart. in Nees, Syst. Laur.: 153. 1836; Meissner in DC., Prodr. 15(1): 45. 1864; ibid. in Martius, Fl. Bras. 5(2): 155. 1866; Mez, Jahrb. Königl. Bot. Gart. Berlin 5: 141. 1889; Kopp, Mem. New York Bot. Gard. 14: 67. 1966; Moraes, Harvard Pap. Bot. 17(1): 205. 2012 = *Mutisiopersea rufotomentosa* (Nees & Mart.) Kosterm., Rheedia 3(2): 135. 1993. TYPE: BRAZIL. Minas Gerais, Serro, “in sylvis Capões et in Tabuleiro locis editis Montanis Serro Frio,” August 1818, fl., C. F. P. von Martius s.n. (Holotype: M 0147211 [F neg. 6582]; Isotypes, GZU 000254417 [fragment], M 0147212, M 0147213).

60. *Persea venosa* Nees & Mart. in Nees, Linnaea 8: 50. 1833; ibid. in Syst. Laur.: 144. 1836; Meissner in DC., Prodr. 15(1): 48. 1864; ibid. in Martius, Fl. Bras. 5(2): 153, t. 48, fig. 1. 1866; Mez, Jahrb. Königl. Bot. Gart. Berlin 5: 172. 1889; Kopp, Mem. New York Bot. Gard. 14: 30. 1966; Moraes, Komarovia 6(1): 52. 2008; ibid. in Harvard Pap. Bot. 17(1): 206. 2012. TYPE: BRAZIL. São Paulo, Iperó, “Ypanema,” s.d., fl., F. Sellow B 1387 c 422 (Holotype:

B[†]; Lectotype, designated by Moraes, 2008: 52: G-DC 00135213; Isolectotypes, GZU 000254420, HAL 0103845, K 000602076, K 000512722, NY 00355864 [fragment ex G-DC].

Synonym: *Persea venosa* Nees & Mart. var. β *tersa* Nees & Mart. in Nees, Linnaea 8: 50. 1833; Meissner in DC., Prodr. 15(1): 49. 1864; ibid. in Martius, Fl. Bras. 5(2): 153, t. 48, fig. 2. 1866; Kopp, Mem. New York Bot. Gard. 14: 30. 1966; Moraes, Komarovia 6(1): 52. 2008; ibid. in Harvard Pap. Bot. 17(1): 206. 2012. TYPE:

BRAZIL. Loco haud indicato, s.d., fl., *F. Sellow XXIV* (Holotype: B[†]; Lectotype designated by Moraes, 2008: 52: GZU 000273810 [annotated by Nees with “ β ”]). Probable isolectotype: LISU [24000] ex Herbarium Brasiliense Dr. Alexandre Rodrigues Ferreira nr. 693. Specimen: BRAZIL. “in campestribus altis ad sylv. margines / Provinciae S. Pauli et Min. Ger.” s.d., fr., *C. F. P. von Martius s.n.* (M 0147206 [“*Persea hypoglauca* Mart.” herbarium name]).

Further information in Moraes (2008).

REMARKS

1. *Martii Herbar. Flora Brasil. N° 478*: BRAZIL. Rio de Janeiro, “in horto (Chacara) secundum viam ad S. Clemente, prope Sebastianopolin, cultum,” March–April 1833, fr., *L. Riedel s.n. & B. Luschnath s.n.* (BR 0000013332549, LE [4 sheets], NY 459793), belongs to *Cinnamomum camphora* (L.) J. Presl in Berchtold and J. Presl, Přir. Rostlin 2: 36, 47–56, t. 8. 1825 [1823?].
2. Meissner (1866: 283) has reported a collection of Martius from Rio de Janeiro for *Goeppertia hirstuta* (Schott) Nees, Syst. Laur.: 366. 1836; Meissner in DC., Prodr. 15(1): 172. 1864 [= *Endlicheria paniculata* (Spreng.) J.F. Macbr., Publ. Field Mus. Nat. Hist., Bot. Ser. 13 (2/3): 850. 1938]. However, it seems to be a mistake since no other author has mentioned this material, neither it has been located in Munich, nor in any other herbarium.
3. Specimen at M 0111066 has been wrongly attributed to Martius. In fact, it is a Sellow collection belonging to *Ocotea acutifolia* (Nees) Mez (see Moraes, 2008).
4. The name *Laurus paniculigera* Mart. ex Colla, Herb. Pedem. 5: 62. 1836, according to Moraes et al. (2014), remains unresolved since no material has been located at TO. However, as indicated by the former authors, in Herbarium Sonder at MEL, there are two specimens that agree with the protologue and belong to *Metrodorea nigra* A. St.-Hil., Fl. Bras. Merid. (quarto ed.) 1: 81, t. 16. 1825.
5. Specimen at MEL 2324410 has two handwritten labels, one annotated with “*Strychnodaphne* Nees?”, the other with “*Laurus Martius*”. Although its identification is not solved yet, it resembles the pattern of specimen at M 0111065, thus of *Nectandra sarcocalyx* Nees.

INDEX TO SCIENTIFIC NAMES

Current accepted names in ***boldface italics***. Synonyms in *italics*. Unpublished (herbarium) names in regular typeset. Numbers in parentheses indicate entries of the respective species in the text.

- Acrodiclidium brasiliense* Nees (12)
- Acrodiclidium canella* (Meisn.) Mez (13)
- Acrodiclidium cayennense* (Meisn.) Mez (13)
- Acrodiclidium guianense* Nees var. *caudatum* Meisn. (14)
- Acrodiclidium meissneri* Mez (14)
- Acrodiclidium puchury-major* (Mart.) Mez (15)
- Aiouea laevis* (Mart.) Kosterm. (1)
- Aiouea brasiliensis* Meisn. (1)
- Aiouea brasiliensis* Meisn. var. *attenuata* Meisn. (1)
- Aiouea riedelii* Mez (1)
- Aiouea tenuiflora* Nees ex Meisn. (41)
- Aniba canellilla* (Kunth) Mez (2)
- Aniba citrifolia* (Nees) Mez (3)
- Aniba desertorum* (Nees) Mez (4)
- Aniba permollis* (Nees) Mez (5)
- Aniba puchury-minor* (Mart.) Mez (6)
- Aperiphracta martiana* Nees (50)
- Aperiphracta velutina* Nees (55)
- Aydendron brasiliense* (Nees) Meisn. (12)
- Aydendron canella* Meisn. (13)
- Aydendron cayennense* Meisn. (13)
- Aydendron citrifolium* Nees (3)
- Aydendron cujumary* (Mart.) Nees (2, 36)
- Aydendron desertorum* Nees (4)
- Aydendron firmulum* Nees (35)
- Aydendron permolle* Nees (5)
- Aydendron suaveolens* Nees (2)
- Aydendron suaveolens* Nees var. β Nees (44)
- Camphoromoea laxa* Nees (43)
- Camphoromoea subtriplinervia* Nees (31)
- Camphoromoea tenuiflora* (Nees) Meisn. (33)
- Camphoromoea venulosa* Nees (52)
- Cassytha americana* Nees var. *brasiliensis* (Nees) Meisn. (7)
- Cassytha americana* Nees var. *puberula* (Nees) Meisn. (7)
- Cassytha brasiliensis* Mart. ex Nees (7)
- Cassytha filiformis* L. (7)
- Cinnamomum camphora* (L.) J. Presl (Remarks)
- Cinnamomum erythropus* (Nees & Mart.) Kosterm. (8)
- Cinnamomum verum* J. Presl (9)
- Cinnamomum zeylanicum* Blume (9)
- Cinnamomum zeylanicum* Blume var. *microphyllum* Nees (9)
- Cinnamomum zeylanicum* Breyne. (9)
- Chlorocardium rodiei* (R.H. Schomb.) Rohwer, H.G. Richt. & van der Werff (10)
- Cryptocarya aü-tüva* Mart. ex Nees (5)
- Cryptocarya canellilla* Kunth (2)
- Cryptocarya guianensis* Meisn. (10)
- Cryptocarya laevis* Nees ex Mart. (1)
- Cryptocarya mandiocanna* Meisn. (10)
- Cryptocarya monticola* Mart. (48)
- Cryptocarya monticola* Mart. ex Nees (48)
- Cryptocarya moschata* Mart. (10)
- Cryptocarya moschata* Nees & Mart. (10)
- Cryptocarya pretiosa* Mart. (2)
- Cryptocarya pyriformis levis* Nees (1)
- Cryptocarya riedeliana* P.L.R. Moraes (10)
- Dicipellium caryophyllatum* Nees (11)
- Dicypellium caryophyllaceum* (Mart.) Nees & Mart. (2, 11)
- Endlicheria paniculata* (Spreng.) J.F. Macbr. (Remarks)
- Goeppertia hirstuta* (Schott) Nees (Remarks)
- Gymnobalanus minarum* Nees & Mart. (45)
- Laurus adamantina* Mart. (54)
- Laurus Ätiiuva* Mart. (5)
- Laurus amazonum* Mart. (17)
- Laurus amoena* Mart. (26)
- Laurus aurantiodora* Ruiz & Pav. (44)
- Laurus canellilla* Willd. (2)
- Laurus cassiodoides* Mart. (9)
- Laurus cassiodoides* Mart. ex Miq. (9)
- Laurus ceanothifolia* Mart. (32)
- Laurus cinnamomum* L. (9)
- Laurus coruscans* Bonpl. ex Willd. (37)
- Laurus crassifolia* Poir. (13)
- Laurus cuspidata* Mart. (19)
- Laurus dura* Mart. (42)
- Laurus egensis* Mart. (19)
- Laurus hihua* Ruiz & Pav. (20)

- Laurus japurensis* Mart. (21)
Laurus leptobotra Ruiz & Pav. (33)
Laurus longifolia Mart. (37)
Laurus membranacea Sw. (23)
Laurus nitida Ruiz & Pav. (33)
Laurus ocotea Rich. (39)
Laurus opifera Mart. ex Meisn. (44)
Laurus paniculigera Mart. ex Colla (Remarks)
Laurus pauciflora Mart. (46)
Laurus paulina Mart. (47)
Laurus persea L. (58)
Laurus pichurim Mart. (15)
Laurus pretiosa Mart. (2)
Laurus pubescens Dombey (29)
Laurus purpurea Ruiz & Pav. (28)
Laurus quixos Lam. (2)
Laurus reticulata Ruiz & Pav. (29)
Laurus riparia Mart. (12)
Laurus sanguinea (Rol.) Sw. (11)
Laurus saporosa Mart. (26)
[*Laurus*] *sarcocalyx* Mart. (24)
Laurus villosa Willd. (29)
Leptodaphne subalpina Nees (33)
Leptodaphne tenuiflora Nees (33)
Licaria brasiliensis (Nees) Kosterm. (12)
Licaria cannella (Meisn.) Kosterm. (13)
Licaria cayennensis (Meisn.) Kosterm. (13)
Licaria crassifolia (Poir.) P.L.R. Moraes (13)
Licaria cymbarum (Kunth) Pittier (37)
Licaria polyphylla (Nees) Kosterm. (14)
Licaria puchury-major (Mart.) Kosterm. (15)
Mespilodaphne aurantiodora (Ruiz & Pav.) Meisn. (44)
Mespilodaphne ceanothifolia Nees (32)
Mespilodaphne complicata Meisn. (35)
Mespilodaphne glauca (Nees) Meisn. var. *virescens* Meisn. (47)
Mespilodaphne indecora (Schott) Meisn. (41)
Mespilodaphne indecora (Schott) Meisn. var. *stricta* Meisn. (41)
Mespilodaphne nitida (Ruiz & Pav.) Meisn. (33)
Mespilodaphne nutans (Nees) Meisn. (47)
Mespilodaphne opifera (Mart.) Meisn. (2, 44)
Mespilodaphne phillyreoides (Nees) Meisn. (48)
Mespilodaphne phillyreoides Nees (Meisn.) var. *oblonga* Meisn. (48)
Mespilodaphne pretiosa Nees & Mart. (2)
Mespilodaphne pretiosa Nees & Mart. var. *angustifolia* Nees (2)
Mespilodaphne pulchella (Nees & Mart.) Meisn. (49)
Mespilodaphne pulchella (Nees & Mart.) Meisn. var. *elliptica* Meisn. (49)
Mespilodaphne pulchella (Nees & Mart.) Meisn. var. *ferruginea* Meisn. (49)
Mespilodaphne tristis Meisn. (53)
Metrodorea nigra A. St.-Hil. (Remarks)
Mezilaurus navalium (Allemão) Taub. ex Mez (10)
Misanteca brasiliensis (Nees) Lundell (12)
Misanteca cannella (Meisn.) Lundell (13)
Misanteca cayennensis (Meisn.) Lundell (13)
Misanteca cymbarum (Kunth) Lundell (37)
Misanteca polyphylla (Nees) Lundell (14)
Misanteca puchury-major (Mart.) Lundell (15)
Mutisiopersea rufotomentosa (Nees & Mart.) Kosterm. (59)
Nectandra acuminata (Nees & Mart.) J.F. Macbr. (16)
Nectandra acutifolia (Ruiz & Pav.) Mez (16)
Nectandra acutissima Nees ex Meisn. (25)
Nectandra amara Meisn. var. *chartacea* Meisn. (27)
Nectandra amara Meisn. var. *subevenia* Meisn. (27)
Nectandra amazonum Nees (17)
Nectandra berchemiifolia Meisn. (16)
Nectandra berchemiaeefolia Meisn. (16)
Nectandra canescens Nees & Mart. (18, 27)
Nectandra cuspidata Nees & Mart. (19)
Nectandra cuspidata Nees & Mart. var. *macrocarpa* Nees (23)
Nectandra cymbarum (Kunth) Nees (2, 37)
Nectandra hihua (Ruiz & Pav.) Rohwer (20, 22)
Nectandra japurensis Nees & Mart. (21)
Nectandra latifolia (Kunth) Mez (28)
Nectandra leucantha Nees & Mart. (10, 22)
Nectandra leucantha Nees var. *peruviana* Meisn. (20)
Nectandra lucida Nees (20)
Nectandra megapotamica (Spreng.) Mez (24, 26)
Nectandra membranacea (Sw.) Griseb. (23)
Nectandra membranacea (Sw.) Griseb. ssp. *cuspidata* (Nees & Mart.) Rohwer (19)
Nectandra mollis (Kunth) Nees (29)
Nectandra mollis (Kunth) Nees ssp. *oppositifolia* (Nees & Mart.) Rohwer (25)
Nectandra neesiana Miq. (46)
Nectandra nitidula Nees & Mart. (24)
Nectandra nitidula Nees & Mart. var. *maior* Nees (13, 24)
Nectandra nitidula Nees & Mart. var. *minor* Nees (24)
Nectandra nitidula Nees & Mart. var. *nitidula* (24)
Nectandra oppositifolia Nees & Mart. (25)
Nectandra oppositifolia Nees & Mart. fo. *intermedia* Mez (25)
Nectandra oppositifolia Nees & Mart. var. *angustifolia* Nees & Mart. (25)
Nectandra oppositifolia Nees & Mart. var. *oppositifolia* (25)
Nectandra polita Nees & Mart. (28)
Nectandra polyphylla Nees (14)
Nectandra psammophila Nees & Mart. (26)
Nectandra puberula (Schott) Nees (27)
Nectandra puchury-major (Mart.) Nees & Mart. (2, 15)
Nectandra puchury-minor (Mart.) Nees (2, 6)
Nectandra purpurea (Ruiz & Pav.) Mez (28)
Nectandra reticulata (Ruiz & Pav.) Mez (29)
Nectandra rigida (Kunth) Nees var. *canescens* Mez (18)
Nectandra rodgiaei Schomb. (10)
Nectandra rodioei R.H. Schomb. (10)
Nectandra sarcocalyx Nees (24, Remarks)
Nectandra schomburgkii Meisn. (20)
Nectandra schottii Meisn. (25)

Nectandra villosa Nees & Mart. var. *venosa* Nees (29)
Nectandra virgultosa Nees (56)
Nectandra xanthocalyx Nees & Mart. (57)
Ocotea acutifolia (Nees) Mez (Remarks)
Ocotea amara Mart. (37)
Ocotea aurantiodora (Ruiz & Pav.) Mez (44)
Ocotea bracteolata (Nees) Mez (30)
Ocotea camphoromoea Rohwer (31)
Ocotea caryophyllacea (Mart.) Kostel. (11)
Ocotea ceanothifolia (Nees) Mez (32)
Ocotea cernua (Nees) Mez (33)
Ocotea citrosmoides (Nees) Mez (34)
Ocotea complicata (Meisn.) Mez (35)
Ocotea cujumary Mart. (36)
Ocotea cymbarum Kunth (37)
Ocotea daphnoides Mart. (42)
Ocotea declinata (Meisn.) Mez (38)
Ocotea deflexa Rohwer (38)
Ocotea desertorum Mart. (4)
Ocotea fallax Miq. ex Mez (46)
Ocotea fasciculata (Nees) Mez (35)
Ocotea firmula Mart. (35)
Ocotea glauca (Nees) Mez var. *virescens* (Meisn.)
 Mez (47)
Ocotea guianensis Aubl. (39)
Ocotea hypoglauca (Nees & Mart.) Mez (40)
Ocotea indecora (Schott) Mez (41)
Ocotea lanceolata (Nees) Nees (42)
Ocotea lancifolia (Schott) Mez (42, 54)
Ocotea latifolia Kunth (28)
Ocotea laxa (Nees) Mez (43, 52)
Ocotea leptobotra (Ruiz & Pav.) Mez (33)
Ocotea longifolia Kunth (44)
Ocotea lucida Mart. (20)
Ocotea membranacea (Sw.) R.A. Howard (23)
Ocotea minarum (Nees & Mart.) Mez (45)
Ocotea mollis Kunth (29)
Ocotea neesiana (Miq.) Kosterm. (46)
Ocotea nutans (Nees) Mez (47)
Ocotea obtusifolia Mart. (4)
Ocotea odorifera (Vell.) Rohwer (2, 42)
Ocotea opifera Mart. (44)
Ocotea petalanthera (Meisn.) Mez (30)
Ocotea phillyreoides (Nees) Mez (48)
Ocotea pretiosa (Nees & Mart.) Benth. (2)
Ocotea pretiosa Mez (2, 42)
Ocotea pretiosa Mez var. *indecora* (Schott)
 Vattimo-Gil (41)
Ocotea puchury-major Mart. (15)
Ocotea puchury-minor Mart. (6)
Ocotea pulchella (Nees & Mart.) Mez (49)
Ocotea quixos (Lam.) Kosterm. (2)
Ocotea rufotomentosa Mart. (50)
Ocotea spixiana (Nees) Mez (50)
Ocotea suaveolens (Meisn.) Benth. ex Hieron. (2)
Ocotea subacris Mart. (42)
Ocotea subalpina (Nees) Mez (33)
Ocotea subdecumbens M.A. Lisboa & J. Badini (47)

Ocotea subtriplinervia (Nees) Mez (31)
Ocotea tabacifolia (Meisn.) Rohwer (51)
Ocotea teleiandra (Meisn.) Mez (52)
Ocotea tenuiflora (Nees) Mez (33, 46)
Ocotea tristis (Nees & Mart.) Mez (48, 53)
Ocotea tubigera Mart. (45)
Ocotea umbrosa Kunth (51)
Ocotea umbrosa (Nees) Mart. ex Mez (51)
Ocotea variabilis Mart. ex Nees (54)
Ocotea variabilis (Nees) Mez (54)
Ocotea velutina Mart. (55)
Ocotea velutina (Nees) Rohwer (55)
Ocotea venulosa (Nees) Baitello (52)
Ocotea virgultosa (Nees) Mez (56)
Ocotea xanthocalyx (Nees & Mart.) Mez (57)
Oreodaphne bracteolata Meisn. (30)
Oreodaphne cernua Nees (33)
Oreodaphne citrosmoides Nees (34)
Oreodaphne declinata Meisn. (38)
Oreodaphne dispersa Nees & Mart. (46)
Oreodaphne fallax Miq. (46)
Oreodaphne glauca Nees (52)
Oreodaphne guianensis (Aubl.) Nees (39)
Oreodaphne guianensis (Aubl.) Nees var. *argentea*
 Meisn. (39)
Oreodaphne guianensis (Aubl.) Nees var. *guianensis* (39)
Oreodaphne indecora (Schott) Nees (41)
Oreodaphne japurensis Meisn. (46)
Oreodaphne kunthiana Meisn. (47)
Oreodaphne lancifolia (Schott) Nees (42)
Oreodaphne leptobotra (Ruiz & Pav.) Nees (33)
Oreodaphne longifolia (Kunth) Nees (44)
Oreodaphne martiana Nees (42)
Oreodaphne martiana Nees var. *thymelaeoides* Meisn. (42)
Oreodaphne minarum Steud. (51)
Oreodaphne nitidula Nees & Mart. (42)
Oreodaphne nitidula Nees & Mart. var. *lanceolata*
 Meisn. (42)
Oreodaphne nutans Nees (47)
Oreodaphne nutans Nees var. *sylvestris* Nees (47)
Oreodaphne opifera (Mart.) Nees (44)
Oreodaphne phillyreoides Nees (48)
Oreodaphne pulchella Nees & Mart. (49)
Oreodaphne spixiana Nees (50)
Oreodaphne suaveolens Meisn. (2)
Oreodaphne subalpina (Nees) Meisn. (33)
Oreodaphne teleiandra Meisn. (52)
Oreodaphne thymelaeoides Nees & Mart. (42)
Oreodaphne tristis Nees & Mart. (53)
Oreodaphne tristis Nees & Mart. var. *oblongifolia*
 Nees & Mart. (53)
Oreodaphne tristis Nees & Mart. var. *tristis* (53)
Oreodaphne umbrosa Nees (51)
Oreodaphne umbrosa (Kunth) Nees (51)
Oreodaphne variabilis Nees (54)
Oreodaphne velutina Nees (55)
Oreodaphne venulosa (Nees) Meisn. (52)
Persea acuminata Nees & Mart. (16)

Persea americana Mill. (58)
Persea canescens Mart. (18)
Persea caryophyllacea Mart. (11)
Persea caryophyllata Mart. (11)
Persea ceanothifolia Mart. ex Nees (32)
Persea erythropolis Mart. (8)
Persea erythropolis Nees & Mart. (8)
Persea erythropolis Nees & Mart. var. *angustata* Meisn. (8)
Persea erythropolis Nees & Mart. var. *mixtinervia* Meisn. (8)
Persea gratissima Gaertn. (58)
Persea hypoglauca Mart. (60)
Persea hypoglauca Nees & Mart. (40)
Persea indecora Schott (41)
Persea lancifolia Schott (42)
Persea laxa Mart. (43)
Persea laxa Mart. ex Nees (43)
Persea leucantha Mart. (22)
Persea longifolia (Kunth) Spreng. (44)
Persea membranacea (Sw.) Spreng. (23)
Persea mollis (Kunth) Spreng. (29)

Persea paniculigera Mart. (24)
Persea puberula Schott (27)
Persea rufotomentosa Nees & Mart. (59)
Persea sarcocalyx Mart. (24)
Persea scrobiculata Meisn. (40)
Persea subtriplinervia Mart. ex Nees (31)
Persea tabacifolia Meisn. (51)
Persea tenuiflora Mart. (33)
Persea tenuiflora Mart. ex Nees (33)
Persea venosa Nees & Mart. (40, 60)
Persea venosa Nees & Mart. var. β *tersa* Nees & Mart. (60)
Petalanthera bracteolata Nees (30)
Petalanthera paniculigera Nees (24)
Phoebe erythropolis (Nees & Mart.) Mez (8)
Phoebe membranacea (Sw.) Nees (23)
Pomatiolum canescens Mart. (18)
Pomatiolum oppositifolium Nees (25)
Silvia navalium Allemão (10)
Strychnodaphne lanceolata Nees (42)
Teleandra glauca Nees & Mart. (52)
